

# ILLUMINATED 20MM GREEN DOT SIGHT INSTRUCTIONS

**SPECIAL FEATURES OF THIS SIGHT ARE:**

- Tubeless design with 32mm reflex lens aperture, providing a wide field of view, suitable for rapid-firing or shooting of moving targets besides normal shooting.
- Parallax corrected and unlimited eye relief.
- Knob windage and elevation.
- Built-in mount (integrated rail) for standard bases.
- Very light weight.
- Low power consumption for long battery life.

**BATTERY:**

Your Sight is powered by one 3V lithium battery (CR2032 or equivalent). Should your dot grow dim or not light, you will need to replace the battery. To install battery, unscrew battery cover and install new battery "+" side up, and replace cover.

**MOUNTING:**

Your Sight includes an integrated rail that fits standard, 3/8" dovetail bases. This is suitable for most applications. Because of unlimited eye-relief with the sight you should provide at least three inches of clearance between the mirror housing and your eye while shooting. Set the rail onto the base so that the rail claws align with the grooves. Securely tighten the locking screw.

**ZEROING:**

With the sight mounted, rest the gun on a solid support and aim at a target 50 to 100 yards (or meters) away.
