From Hunting to Pest Control & Recreation to Target & Competition, all Gamo air gun and ammunition packages are clearly labeled and color coordinated to designate their recommended primary usage—so you can easily pair the right ammo with the right air gun. Every time.

### GAMO PRODUCT RECOMMENDED USAGE

#### HUNTING

Delivers accuracy with higher energy downrange for ultimate impact and penetration—ideal for small game such as rabbits, squirrels, raccoons, and crows.

#### TARGET + COMPETITION

Offers the ultimate in accuracy and consistent performance—ideal for both training and competitive shooting.

## SOUND SUPPRESSION TECHNOLOGY AND SOUND LEVELS

The Whisper is the noise-suppressing technology already known and trusted by thousands of shooters around the world. It is one of the first noise-dampening technologies created in the air gun industry. The Whisper is an integrated noise and muzzle blast reducer molded onto the barrel, forming a single part.

The Whisper Maxxim features two noise dampening chambers, offering a quieter performance as well as an improved muzzle break design. The new muzzle break helps reduce the recoil and is also integrated with the bull barrel. This new technology results in a lightweight, fluted, polymer/steel rifled barrel, integrating one of the latest sound-suppression technologies from Gamo. The Whisper Maxxim takes less space than the Whisper, keeping a better weight balance while making the air rifle quieter.

The Whisper® Fusion® technology incorporates a double integrated sound moderator making it the quietest Gamo air rifle. The pellet travels through two different chambers, compressing and preventing the noise expansion.

Gamo's patented Whisper® technology leads the air rifle industry in sound suppression. This technology is categorized into three tiers—Whisper, Whisper Maxxim and Whisper Fusion—for quiet, quieter, and quietest performance. However, "noise reduction" does not mean "silence," as sound levels will vary depending upon pellet choice. A lighter, faster and smaller caliber pellet, for instance, will produce a louder sound than a heavier, slower and higher caliber pellet. To further assist with your purchasing decision, please refer to the chart above.

## CUSTOM ACTION TRIGGER

The revolutionary **C.A.T. (Custom Action Trigger)** enables Gamo air rifle owners to independently adjust the 1st and 2nd stages of their trigger to tailor the trigger pull and crispness to their personal preference. Simply loosen the 1st stage adjustment screw and the trigger travel increases. If a shorter travel length is desired, just tighten the same screw to decrease the 1st Stage travel length. The 2nd Stage Adjustment is made just as easily—unscrew the adjustment setting to increase the 2nd Stage travel length or decrease it by screwing in the same adjustment point.

Based off the groundbreaking IGT platform, the **IGT MACH 1™** replaces the standard spring powerplant with an Inert Gas Cylinder, but the IGT MACH 1's monster 33 millimeter cylinder delivers more velocity and terminal penetration. The pneumatic cylinder rockets pellets up to 1650 Feet Per Second (fps) in .177 caliber (with alloy pellets), and promotes smooth and consistent cocking efforts with constant power delivered to any pellet you shoot.

If you want: **More Precision, Less Vibration and True Knock Down Power.** Make sure your next Gamo has the IGT MACH 1 inside.

Improve your knockdown power and accuracy! Enhance your hunting experience! The **IGT™ (Inert Gas Technology™)** from Gamo enhances your hunting or target shooting experience. This technology consists of a pneumatic cylinder that replaces the spring, enabling the shooter to get more terminal velocity (up to 1,300 fps with .177 Cal. alloy pellets and up to 1,000 fps with .22 Cal. alloy pellets), less vibration, more consistent power, and a constant and smooth cocking effort.

Gamo, pioneering the latest air gun technology, delivers the groundbreaking **Triple R (Recoil Reducing Rail)**. The RRR was developed to subdue the taxing stresses placed on your scope from the intense recoil of air guns and high-powered rifles. The Recoil Reducing Rail uses patent pending two-piece aluminum construction separated by dual polymer struts to absorb the shockwaves generated by the recoil. Once the scope is mounted to the Recoil Reducing Rail, the recoil stresses to its internal components are reduced by almost 100%.

Hunters demand: **Scope Reliability, Reduced Vibration and Dead On Accuracy.**

The Triple R (Recoil Reducing Rail)—Preserve Your Scope's Lifetime for the Next Time. Only from Gamo.
